

be kept within the carrying capacity of the player's hands, or they will collapse and the stroke will be ruined.

It is highly desirable that we have all the hand strength it is possible for us to acquire.

Every golfer should have a grip developer (sometimes called a wrist machine), and use it to develop his grip.

The reason why many players "slice" is because they either do not have strong hands or they fail to use their hand strength at the critical moment when the power of the stroke is to be transmitted to the ball. When the hands work as they should, the player can actually feel that he is bending the club shaft on the ball. If you cannot feel this you will not get the distance of which you are capable.

The majority of players who fail in transmission of power do so because their left hand fails to act as a fulcrum for the right hand to strike against. The left hand must *bear back* against the right.

To understand this more fully take a club in hand and press the face of it against any solid obstruction, with enough force to bend the shaft. Maintain this pressure and ask yourself, "What am I doing with the upper palm of my left hand?" You will discover that you are very decidedly pressing the club handle backward against the forward pressure of the right hand. Take the left hand away and try to maintain the same bend in the club shaft and you will at once be convinced of this fact. This back pressure of the left hand must be exerted at the moment of impact if you are to overcome the resistance of the ball. If you fail to do it, the club *handle* may go thru, but the club head will come dangling along behind like a dog's tail.

FUNDAMENTAL 12
USE YOUR HANDS,
i. e. Prevent Leverage
Collapse.

Some players might almost as well stick their hands in their pockets for all the use they make of them.
